

Treating Brown and Age Spots with PhotoRejuvenation

There are a number of reasons why brown spots or age spots can appear on our skin. Many times they are evidence of aging, sun-damage or an active lifestyle. Just because they appear on your skin does not mean you have to live with them. Here at DermacenterMD, we offer an innovative and effective treatment called BBL PhotoRejuvenation. This can help to reduce signs of aging and reduce the appearance of brown spots and age spots.

The BBL broadband light will be administered to your skin using a hand piece and a flash of laser light will gently heat up the under layers of your skin. You may briefly feel a rubber band snap or warm sensation as the light is absorbed by your skin. The heat absorbed by the targeted areas will stimulate your skin cells to generate new collagen. This will help to restore your skin's natural beauty, blending its natural color and making it smoother, vibrant and younger. It can also eliminate those pesky brown spots and age spots by targeting the unwanted melanin responsible for pigmented lesions. BBL can improve the overall appearance of your skin.

This procedure is non-invasive with minimal discomfort and virtually no down-time. Recovery time depends on the depth of the treatment. There are several different depths that can be utilized depending on your particular needs. The deeper the treatment, the longer it can take to heal. Redness may be present for several hours after the procedure and some pigmented lesions may darken and then fade and flake off leaving your skin smoother, fine wrinkles will be less noticeable, and sun spots or uneven pigmentation will fade. You may need 2 to 5 treatments at 2-4 week intervals to get your desired results. Any area of the body can be treated, but the most popular areas are the face, neck, back of the hands, chest and shoulders.

If you or someone you know is interested in improving their complexion and rejuvenating their skin, call our office today at **574-522-0265** to schedule your consultation with Dr. Moore and his team today.
